Excerpt from Proceedings of the California Academy of Sciences, Vol. 2: Cretaceous Deposits of the Pacific Coast The Cretaceous deposits of the Pacific Coast of North America, as already known to geologists, lie within a narrow continental border mainly to the west of the Great Basin and the northern Cordillera. In their north and south range the scattered and disconnected occurrences extend from Mexico to Alaska and the Arctic Ocean, although they do not territorially cover a large region. Represented upon a map with other formations, they might hardly be noticed except by one looking for them. They are but remnants, or even mere traces, of what was once a more extensive system of deposits, which in some places have been entirely removed, and in others covered by later sediments, and in some cases by volcanic flows. One of the largest and most noteworthy of these remnants occupies the Sacramento Valley in central-northern California, where it occurs in unconnected dashes along its borders, in low hills flanking the valley upon the east and west. Southward in California, the...
